

THINKING WITH NUMBERS

Lesson Descriptions

Replacing Dots

Replacing objects, in a one-to-one match, does not change the number of a set. Children often will want to recount to check how many are in a group after you substitute two children for two already in the group. Rearranging objects or replacing objects, one-to-one, does not change the number.

Expected content outcomes include helping children learn:

- that replacing objects, one-to-one, does not change the number of objects,
- to accurately count a set of objects and tell how many, and
- to begin to recognize the symbols for the numbers.
