

THINKING WITH NUMBERS

Lesson Descriptions

Adding And Removing Dots

Adding objects or removing objects does change the number of objects in a set. When you add objects, there are more. When you remove objects, there are fewer.

Expected content outcomes include helping children learn:

- that adding objects increases the number,
- that removing objects decreases the number,
- to accurately count a set of objects and tell how many, and
- to begin to recognize the symbols for the numbers.
